What to Do During a Fire

- **Alert everyone**

When you encounter a fire, **alert everyone** around you and yell **“FIRE”** to immediately attract attention. After alerting your surroundings now you must try to alert everyone in the building, you must activate the **fire alarm** that you can see near you.
Call 911 for help to stop the fire from expanding.
also Inform other people you see as you make your way to the nearest exit.

- **Evacuate immediately**

Your life is more important than any possessions, do not bring any unnecessary objects that will slow your evacuation. Get out, **stay out of danger, leave immediately** and **do not return to gather personal belongings**. Once you are outside, stay outside.
Use the **fire exit** and don't use the elevator if you are evacuating since you might get trapped inside of it during a fire.

- **Crawl low under smoke**

Smoke and poisonous gases from a fire rise, while cooler, cleaner air stays closer to the floor. Crawl on hands and knees if you encounter smoke, drop to the floor and crawl toward the exit. also place a cloth or towel over your mouth and nose to filter out some of the smoke.

- **Check doors for heat**

Before opening a closed door, you must check for heat to see if there is a fire on the other side. Opening a door to a fire can cause a **dangerous flashover.**
Use the back of your hand to feel the doorknob and the door itself with the back of your hand, not your palm. If the back of your hand is burned, you can still use your palm and fingers to crawl to safety.**Do not open a hot door** If the door or handle is hot, or if smoke is seeping from the cracks, do not open it. There is a fire on the other side. Use an alternative escape route. **Open a cool door slowly** if the door is cool, open it slowly and be ready to slam it shut if you see smoke or fire.

- **If trapped**

If escapes are impossible, you must find a way to **protect yourself until help arrives**. Close the door to the room and use towels, blankets, or clothing to cover the cracks around the door and vents. Wet the towels if possible. This makes sure that the fire is slowed down to get inside of your room. **Call for help**, open a window and wave a brightly colored cloth or flashlight to signal for help. Remain near the window, and if possible, place your head outside to breathe fresh air. Wait for firefighters to arrive.

- **On fire**

If you are on fire, try to keep composure and remember to **stop, drop, and roll.** To quickly put out the fire that is sticking on you.
